

TECHNICAL DATA SHEET

ODEON

ODEON Viewer software

Optimize the use of your data recorded by ODEON

- Intuitive and user-friendly PC software,
- Can transfer data stored in the ODEON
- View the data in tabular form, graphic ...
- Record data in csv, jpeg, pdf format

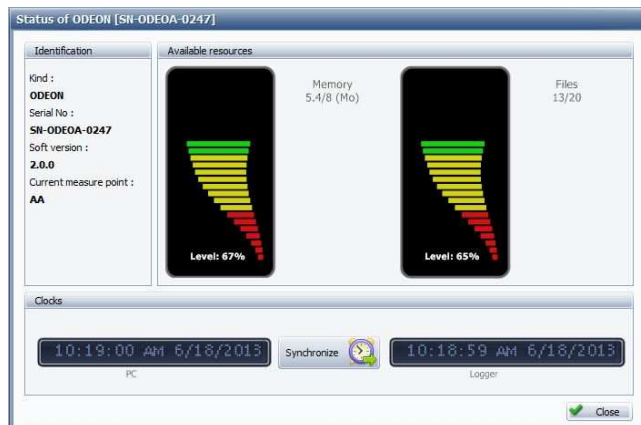

The ODEON Viewer is designed to optimize the use of data from stored records in the portable ODEON. Simple, easy and intuitive it allows access to the configuration of the ODEON, to the function of data on a PC, to the consultation of records as a graph / chart, transfer data in csv, xls , xlsx, jpeg, pdf format.

Configuring the ODEON :

The ODEON setup menu provides access to the serial Number, the software version as well as the state of memory (resource available).

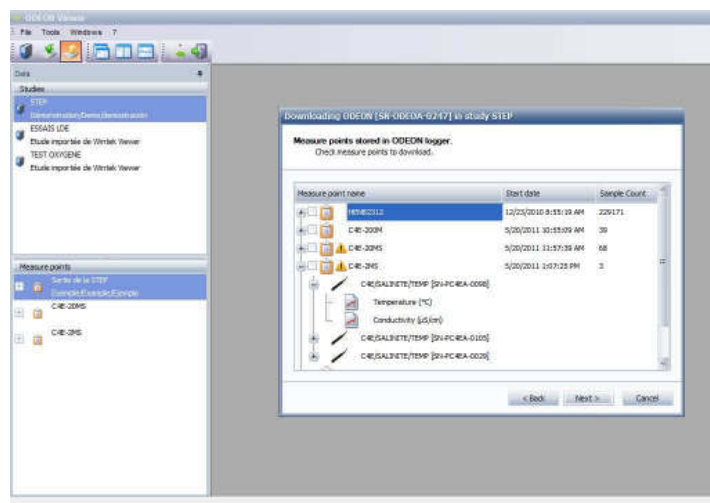

This menu also offers the ability to synchronize the ODEON time with the PC time.

Retrieving data stored in ODEON :

The first step of unloading data allows the user to identify the files stored in the ODEON : information on the number of data stored in the file, information sensor(s) and the saved settings.

It is possible to download one or more files at the same time.

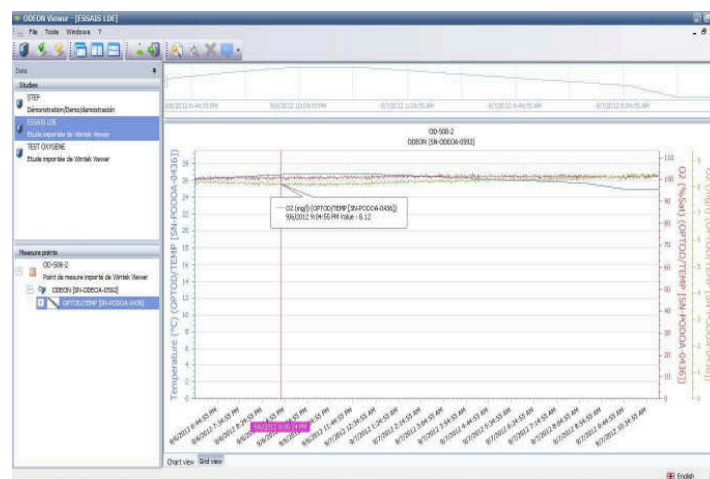

Data Operation/Visualization :

Selected data can be visualized as:

- Customizable graph : zoom function, displaying a cursor to read the data values, many graphics options with a choice of formats, colors, changing the title.

- Table including the serial number of the ODEON, the file name, the selected sensors and the associated parameters.

Recording formats :

Graphs can be saved in picture (jpeg, png, tif, ..) or pdf and database in table csv, xls, xlsx.
